

# BOVIDYL

## Medium for chilled bull semen conservation

Bovidyl is an elaborate medium for chilled semen preservation newly developed by Minitube's scientists.

With its sophisticated buffer system and balanced ionic structure Bovidyl allows chilled semen storage over several days. Bovine serum albumin (BSA) as a strong antioxidant and effective scavenger of ROS (reactive oxygen species) keeps liquid semen highly fertile during storage and transport.

### Your benefits

- Ideal for chilled semen conservation at +4°C to +10°C
- Based on an elaborate, highly effective buffer formula
- Easy to prepare and ready to use after adding egg yolk
- Contains antibiotics corresponding to the EC Directive 88/407
- Produced under Minitube GMP production standards
- Can be transported at room temperature

### Storage

Shipping of Bovidyl can be performed at room temperature for up to 10 days. Storage for longer terms is best at -20°C.

### Composition

Bovidyl contains TRIS, BSA, citric acid, sugars, buffers, proprietary components, antibiotics and bidistilled water. Egg yolk has to be added by the user (10 %).

**Bovidyl**, 270 ml **REF. : 13501/0150**

### Certificates

A general quality certificate as well as batch certificates are available upon request.
